- INSIGHTS

- Strong long-run compounding (about 17% a year) with high volatility (about 30%) and one ~50% drawdown (2022).
- Price is currently below its late-2025 peak but above its 50- and 200-day averages.
- ARIMA barely beats a naive last-price forecast in the backtest, so use the 80% interval as a range, not a point prediction.
